Public, private and charter schools have the same mission of educating children and young adults. But they differ in some fundamental ways. For parents, choosing the right kind of school to send their children can be challenging. The vast majority of school-age children in the United States are educated at Amerka Public Schools. The first public school in the United States, Boston Latin School, was founded in 1635, and most colonies in New England established so-called general schools in the following decades. However, many of these early government agencies restricted the enrolment of male children from white families; girls and people of color have generally been banned. By the time of the American Revolution, rudimentary public schools were established in most states, though it wasn't until the 1870s that every state in the union had such institutions. Indeed, it was not until 1918 that all states require children to complete primary school. Today, public schools provide education for students from kindergarten to 12th grade, and many areas also offer pre-kindergarten classes. Although K-12 education is mandatory for all children in the U.S., the age of attendance varies from state to state. Modern public schools are funded by federal, state and local governments. Overall, state governments provide the most funding, with up to half of the district's funding with income typically coming from income tax and property taxes. Local governments also provide a significant portion of school funding, usually also on the basis of property tax revenues. The federal government makes a difference, usually about 10 percent of total funding. Public schools must accept all students who live within the school district, although the number of students, test scores and the student's special needs (if any) may affect the school the student attends. State and local law dictate class size, testing standards and curriculum. Charter schools are government-funded institutions but run privately. They receive public money based on enrolment data. About 6 percent of American children in K-12 classes attend a charter school. Like public schools, students do not have to pay tuition fees to attend. Minnesota became the first state to legalize them in 1991. Charter schools are named because they are based on a set of guidelines called charters written by parents, teachers, administrators, and sponsorship organizations. These sponsoring organizations may be private companies, non-profit organizations, educational institutions or individuals. These charters usually set out the philosophy of school education and basic criteria for measuring student and teacher success. Each state handles charter school accreditation differently, but these institutions typically have their own charter approved by the state, county or municipal authority to open. If the school does not meet these standards, standards, charter can be withdrawn and the facility closed. Private schools, as the name suggests, are not funded by public tax dollars. Instead, they are funded mainly by training, as well as by private donors and sometimes grants. About 10 per cent of the country's children attend K-12 private schools. Students who attend must either pay tuition or receive financial assistance in order to attend. The cost of attending a private school varies from state to state and can range from about \$4,000 a year to \$25,000 or more, depending on the institution. The vast majority of private schools in the U.S. have ties to religious organizations, with the Catholic Church operating more than 40 percent of such institutions. Non-sectarian schools account for about 20 per cent of all private schools, while the rest of the religious denominations operate. Unlike public or charter schools, private schools are not required to accept all applicants, and they are not required to comply with certain federal requirements, such as the Americans with Disabilities Act, unless they receive federal dollars. Private schools may also require compulsory religious education, unlike public institutions. Indiana offers resident students the opportunity to take free online courses for public schools. Below is a list of free online schools currently serving elementary and high school students in Indiana. In order to qualify for the list, schools must meet the following requirements: classes must be fully available online, they must offer services to state residents, and they must be publicly funded. Virtual schools listed can be charter schools, government government programs, or private programs that receive government funding. Indiana Virtual Charter School (out of the world Many states currently offer tuition-free online schools to resident students under a certain age (often 21). Most virtual schools are charter schools; they receive public funding and are run by a private organization. usually work from a state office or school district. Public school programs vary. Some online public schools offer a limited number of correctional or advanced courses inaccessible on brick-and-mortar public school campuses. Others offer full online diploma programs. Several states have decided to fund places for students in private online schools. Quantity places may be limited, and students are usually asked to apply through their public school counselor. (See also: 4 Types of online high schools). When choosing an online public school, look for an established program that is regional accreditation and has a track record of success. Beware of new schools that are disorganized, unaccredited or subject to the subject public scrutiny. For more suggestions for evaluating virtual schools see: How to choose an online high school. If you want to try something new for your next trip, charter a boat. You will get all the fun of sailing without the year-round cost of docking and maintaining it. If you have never been on a boat for a long period of time, you should try going on a day trip if possible to make sure you are ok to stay on the water for a few hours at a time. That's out of the way, that's how to charter a boat for travel. Go to your options When you charter a boat, there are a few things you need to decide to narrow down your options. Before you dive into any of these areas, have an idea of what kind of budget you want to spend. Keep in mind that overall the cost of chartering a boat can be similar to staying in a good hotel (although with a boat you get transport, a home base to sleep, relax and cook food, all rolled into one place). Make sure someone knows how to swim. One option is to hire a skipper to work on the boat. This will increase the cost of the trip, but it may be worth it if no one in your group knows how to sail. If you decide to go bareboat where you sail the boat yourself, the charter company will put you through a short test to see your skills in action. Pick a place. This could be affected by the season. Some areas are much more pleasant to swim at certain times of the year. For example, places along the northeastern United States are in their prime in the summer. You can also use the boat as an alternative to other forms of transport, such as ferries or planes between the islands. Find out what features you want the boat to have. Choose the size of the boat based on how many people you are traveling with, so there is enough room for everyone to sleep and hang out. If you want certain features such as an advanced music system or area to hang out, then make sure to look for those during the selection process. Choose a company or the other side to rent from. Two of the largest charter companies are SunSail and Wharf and they are owned by the same parent company. Both have seats on an international scale. You can also rent from private parties directly, although a trusted charter company provides peace of mind when it comes to quality boat condition and customer service. Once you are all above figured out, the most time consuming part is done and you will pretty much be installed until you actually arrive at the boat rental site. Collect SuppliesMost charter boats will be equipped with emergency supplies like a rubber boat, flashes, some spare parts, life jackets, first aid kits, a fire extinguisher, and sometimes emergency rations. However, you will need to provide other such as products. You can pay the company in a galley warehouse, or you can buy the food yourself. Either way, make a meal plan to make all the food needed for the trip. Make the most of BoatMost boats come with kitchens, showers, music music and maybe even a barbecue grill, so use everything to make for a great trip! If you decide to tie up at night, you will probably pay a fee, but will have closer access to the land and it is amenities. Get as much benefit from renting a boat as possible, using it as a place to relax, hang out, sleep, eat and more. Clean up and ship OutIn in order to avoid fees, leave the boat in the same condition as it was when you arrived including removing debris. This will help you get a deposit back, which is usually about 25% of the total cost of the charter. If you like the company you used, keep them in mind for future travel as you know they provide an acceptable level of quality with both equipment and customer service. While it's not for everyone and it can be expensive, sailing offers a relaxing and unique experience not easy to find on other modes of transport. If you want a way to get away from it all without having to be too far from civilization, try charting a boat for your next trip.
